### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**DETAILED ACTION**

***Response to Arguments***

1. Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 3-10, 14-16, 22-24, 26-29, 41-45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Alt (5,855,600) in view of Zhu et al. (6,399,215). Alt discloses all the limitation of the claims except for the average grain size in the range as claimed and some of the claimed alloys. Zhu et al. discloses a substrate of medical implant having a grain size as claimed and method to produce an ultra fine-grained metal in order to improve mechanical properties for medical implant. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to make the substrate of Alt having a grain size as claimed in order to improve mechanical properties for the stent.

Regarding to the alloys as claimed that are not mention in Alt or Zhu et al. references, since applicant has not disclose that the specific claimed alloys solve any state problem or for any particular purpose an it appears the sever equally well with other alloys as disclosed in the Alt and Zhu et al. references. Further more the alloys as

claimed are well known in the art or available in the art for making implant. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to substitute the alloys of Alt in view of Zhu with the alloys as claimed. Doing so would amount to mere substitution of one known material for another within the art the serve equally well.
